Kyäni Sunset™—A Perfect Blend

Kyäni Sunset™ was designed to contain only lipid-soluble elements, maximizing the bioavailability of these nutrients for absorption. Sunset is a proprietary combination of tocotrienols (the most potent form of vitamin E), Omega-3s derived from Wild Alaskan Sockeye Salmon (the purest source in the world), Beta Carotene (a natural source of Vitamin A), and the essential Vitamin D.

The health benefits of tocotrienols, Omega-3, Beta Carotene, and Vitamin D are well documented by medical professionals and researchers. Kyäni Sunset offers unparalleled nutritional support to the body’s vital systems including cell health and support for the cardiovascular and immune systems.

Comprised of only lipid-soluble nutrients, Sunset is intended for evening use when the body’s lipid activities are at their peak. Sunset gives the body what it needs when it needs it. Because of this, Kyäni Sunset is the perfect nutritional complement to water-soluble nutrients offered by Kyäni Sunrise™.

9 Reasons to Take Kyäni Sunset™

- Supports Cardiovascular Health
- Helps Reduce Inflammation
- Encourages Healthier Skin and Hair
- Helps Maintain Healthy Cholesterol Levels
- Helps Maintain Healthy Blood Sugar Levels
- Supports Cognitive Function
- Supports Cell Membranes
- Most Potent Vitamin E
- Promotes Healthy Immune Response

Kyäni began with remarkable founding families who, from humble beginnings, achieved enormous success through hard work and innovation. The Hansens took a small petroleum company and turned it into one of the largest independent distributorships in the United States. Similarly, the Taylor family transformed a 3,000-acre potato farm into one of the largest potato farming and cattle operations in Idaho. Today, they use cutting-edge technology to enhance and expand their businesses.

The Founding Families were introduced to the remarkable power of two relatively unknown Superfoods—Wild Alaskan Blueberries and Wild Alaskan Sockeye Salmon. The Hansens and Taylors were impressed by the potency and extraordinary health benefits that these nutrients were able to provide. Harnessing the entrepreneurial power of network marketing, the Founders formed Kyäni to provide nutritional wellness and financial opportunity to millions around the world. Today, Kyäni continues to offer the most compelling nutritional supplements in the industry and the opportunity for Customers and Distributors to experience more health, more wealth, and more life.
Beta-carotene is an organic compound found abundantly in plants and vegetables. A member of the carotenoids, it can be metabolized into Vitamin A, yielding many compelling health benefits. These include heart health, cell protection, and heightened immunity. This essential nutrient is also beneficial in sustaining optical health and brain function.

In the past, the majority of scientific research focused on the less-effective form of Vitamin E called alpha-tocopherols, while as little as one percent focused on the potent tocotrienol Vitamin E. However, a significant shift has taken place over the last few years as a much larger portion of peer-reviewed research articles have been centered on tocotrienols. It’s becoming more clear that, at the molecular level, tocotrienols are a much more potent and effective source of Vitamin E.

One unique aspect of Vitamin D is that it can be created by our bodies with the aid of sun exposure. However, studies show an alarming rate of Vitamin D deficiency in the USA. Since most Americans are not producing enough on their own, Vitamin D supplementation can provide the support and protection the body needs from this essential nutrient.

Omega-3s are an essential fatty acid required for optimal health. This healthy molecule is found in every cell of the body, particularly in the brain and heart. Because the body doesn’t produce these oils on its own, they must be obtained through dietary consumption. Derived from Wild Alaskan Sockeye Salmon and other wild fish, Kyäni Sunset™ contains extremely high levels of both EPA and DHA forms of Omega-3s. Studies show that Omega-3s have profound anti-inflammatory qualities, improving vascularization throughout the body and supporting artery and heart health.

Recently discovered tocotrienol Vitamin E has exhibited substantial benefits to the cardiovascular system including helping to maintain healthy blood pressure and a reduction in blood cholesterol levels by up to 35 percent. Studies have shown a decrease in arterial blockage, reducing risk factors for cardiovascular diseases. Tocotrienols have also proven to be very effective supporters of cell health including protection from oxidation.

Vitamin D is one of several vitamins required for normal growth and development. This essential nutrient contributes to the absorption of calcium, which is an important process for bone development and strength. Vitamin D promotes cellular growth, boosts the immune system, and helps to reduce inflammation. Studies have also shown that Vitamin D assists in regulating blood pressure and improving cardiovascular health.
